ABOUT ME

AI and full-stack engineer building LLM-powered products: RAG pipelines, AI agents and the infrastructure to run them in production. I enjoy the full path from prototype to production: backend, frontend, deployment and monitoring. Software Engineering student at ITBA (expected 2027).

PROFESSIONAL EXPERIENCE

AI Engineer — Galo AI | Full-time | April 2026 – September 2026

- Built RAG pipelines with embeddings and pgvector to match unstructured B2B orders against product catalogs: 20k orders (US$5M+) per month for 50+ clients.
- Shipped production AI agent workflows with tool calling, structured outputs and guardrails, backed by LLM evaluation and regression pipelines.
- Developed features end to end with React, Spring Boot and PostgreSQL.
- Led the migration from a single VPS to three servers with Prometheus, Loki, Metabase, Kafka and RabbitMQ, secured through Cloudflare Tunnel (Zero Trust).
- **Technologies:** Python, Spring Boot, React, PostgreSQL, pgvector, OpenAI/Anthropic APIs, MCP, Kafka, RabbitMQ, Prometheus, Loki, Grafana, Cloudflare, Docker.

Software Engineer — Codify Company | Part-time | September 2025 – February 2026

- Built full-stack features for a ticketing platform handling 200 concurrent users at peak times; optimized endpoints and resolved production incidents.
- Deployed containerized apps on VPS with Docker and Coolify, backed by CI/CD and automated tests.
- Integrated Mercado Pago payments and executed client data migrations.
- **Technologies:** React, Next.js, NestJS, Prisma, PostgreSQL, Docker, Coolify, Mercado Pago, AWS.

AI Engineer — Push&Pop Growth | Freelance | March 2025 – August 2025

- Designed a multi-agent system where an LLM orchestrator delegates tasks to specialized agents, built and traced with Google ADK.
- Built a FastAPI service for real-time WhatsApp and Telegram webhooks, with history in PostgreSQL.
- Containerized with Docker and deployed on Azure.
- **Technologies:** Python, FastAPI, Google ADK, PostgreSQL, Docker, WhatsApp API, Telegram API, Azure.

Full-stack Developer — ITBA Rocketry Team | Contract | August 2025 – September 2025

- Built the team's landing page and internal web tools, focused on frontend.
- **Technologies:** Next.js, React, Vercel.

Research Assistant — ITBA | Part-time | October 2024 – September 2025

- Built a robot integrating electronics (battery, motors) and control systems.
- **Technologies:** Python, C, Arduino, Raspberry Pi, ESP32, Signal Processing.

EDUCATION

Buenos Aires Institute of Technology (ITBA) – Software Engineering | 2022 – 2027 (expected)
Royal Institute of Technology (KTH) – Exchange semester | August 2026 – January 2027
Technical Secondary School No. 7 "T.R.Q." (IMPA) – Avionics Technician (Electronics) | 2015 – 2021

INTERESTS & HOBBIES

Football Player • Miniature Trains • Applied Physics (Relativity & Electromagnetism)

TECHNICAL SKILLS

AI / LLM: RAG, Embeddings & Vector Search (pgvector), AI Agents, Multi-Agent Systems, Google ADK, MCP, Tool Calling, Prompt Engineering, LLM Evals
Languages: Python, TypeScript, Java, JavaScript, SQL, C, C#
Backend: Node.js (NestJS, Express), FastAPI, Spring Boot, Django, REST APIs, Webhooks
Frontend & Mobile: React, Next.js, React Native, iOS Development
Data: PostgreSQL, MySQL, MongoDB, Prisma (ORM), Kafka, RabbitMQ, Metabase
DevOps & Cloud: Docker, Coolify, Linux/VPS, CI/CD, AWS, Azure, Cloudflare (Tunnel, Zero Trust), Prometheus, Loki, Grafana, Git
Testing & Integrations: Unit, Integration & E2E Testing (Jest, Cypress); Mercado Pago, WhatsApp API
Hardware: Arduino, ESP32, Raspberry Pi

LANGUAGES

Spanish: C2 (Native) **English:** C1 (Advanced) **German:** B1 (Intermediate) **French:** A1 (Basic)
